

Fall Harvest Corn

©Hazel Rose Spencer 2018

You'll need 2 squares for each ear. One of your corn color and one of the shuck color. You can use any size or type of square loom to weave these.

The instructions are using the 4" Multi loom as an example but they are all made the same way.

1. Weave your two squares. Fold your corn square in half and sew up the side.

2. Run a gather stitch through the picots on one end, pull tightly and tie off.

3. Stuff your ear of corn firmly but leave a little space at the top.

4. Pinch your shuck square in the center and fold or wad into a bunch. Using the matching yarn, take a few stitches through the 'stem' of this bunch to hold it in place.

5. Wrap your yarn around the stem to draw it up. Knot. Run a gather stitch around the top opening, insert the stem into this opening and pull the gather stitch tight around the stem! Knot. Sew back and forth through the shuck and the top edge of the corn to secure it in place.

These two little ears were woven in the =2" Multi loom, one as usual for that loom and one was woven diagonal, like the quilt weavers. There is also two different types of shucks on them. One is a folded 2" square and the other a tassel of green yarns.

6. Your corn is complete. Find creative ways to use these little ears. On a harvest Wreath, or perhaps a center piece for your table. I made one with a shorter top using the 2" square and one using the 4" square. You can also use a textured stitch for leaf or corn. Usually using a mult-colored yarn for the corn works fine with a plain stitch. A plain color might look nice with a simple all over textured stitch.

These two ears were woven on the 7" Quilt weaver square.

While you're at it you may as well weave a Punkin' To go with them!
